How to Use This Book

The activities in this book have been created to give children a variety of experiences in working with numbers. The first page introduces the number and is followed by activities which stress counting, matching and writing. The activities can be used to supplement your instructional program, for review, extra practice, take-home pages or for fun fillers. The material is flexible enough to use in a variety of ways and, of course, you may wish to create custom pages suited to a child's individual need based upon any one of the ideas in this book.

As the directions for each exercise in this book are simple and easy-to-follow, these materials are well-suited for use in a setting where slightly older children might be available to help the youngest students. Children who can read the directions themselves, or to whom the material has been explained, should be able to complete the work independently.

Booklets/Number Line

or

The pages which introduce each number can be used to create a classroom display or take-home. Copy the pages and tape together to create a number line. Children can color each page to create a valuable teaching aid for your room. You could also make a take-home booklet or number line for each child.

The artwork in this book is deliberately simple, bold and easy for young children to color. These same attributes make it ideal for copying to cut out for bulletin board or wall displays, booklet or folder covers, mobiles, name tags, overhead projections, etc. For stand-up figures, mount the artwork to tag-board, color and cut out. Make a simple V-shaped base with slots and insert the figure.

Stand-Up Figures

These sturdy stand-up figures can be used in a variety of counting, sorting, matching and grouping activities.
